Experience

Meta Platforms Inc **November 2021 - April 2025**
Senior Software Engineer

- Architected and deployed distributed anti-scam verification systems for the Australia and Singapore markets, partnering with legal and data science teams to protect $2B+ in regulatory exposure. Designed centralized logging infrastructure to track advertiser verification success/failure rates across the fraud detection pipeline, ensuring regulatory approval.
- Led backend compliance initiative for Vietnam's under-16 advertising restrictions, directing 2 engineers to build a high-throughput metric aggregation service consolidating compliance data from multiple ads surfaces. Delivered a unified compliance dashboard and enforced platform-wide regulatory adherence across services.
- Reduced advertiser onboarding latency by 30% through backend optimizations in advertiser setup flows, GraphQL/API performance improvements, and data pipeline efficiency. These optimizations directly boosted DAU retention by 15% and reduced churn across small-business advertisers.
- Designed and launched privacy-first ad infrastructure enabling differential outcome tracking at scale for enterprise clients like Amazon and Wayfair. Built distributed backend services balancing privacy guarantees with system performance, now serving thousands of advertisers.
- Implemented large-scale experimentation and analytics to measure backend and workflow changes, leveraging A/B testing frameworks and log-based metrics to deliver measurable engagement and advertiser success improvements.
- Collaborated cross-functionally with legal, product, and data science to deliver mission-critical systems under regulatory and business pressure, ensuring both technical robustness and compliance.
- Mentored junior engineers, conducted system design reviews for distributed services, and contributed to hiring across Ads Infra and Monetization. Helped enforce engineering best practices while scaling team velocity.

Warner Bros Discovery **July 2018 - November 2021**
Software Engineer

- Delivered accessibility-compliant UI components for HBOMax across web and mobile, ensuring full WCAG/ADA compliance and helping mitigate millions in potential legal risk.
- Designed and shipped a customizable avatar system for HBOMax profiles, used by 200K+ users in the first week, enhancing user personalization and visual experience.
- Built the end-to-end ad delivery infrastructure for HBOMax on iOS and tvOS, supporting performant and reliable ad rendering at scale across connected devices.

Redfin **Winter 2017**
Software Engineer

- Engineered Apache Kafka-based data pipeline that reduced push notification processing latency by 10%, optimizing message queuing and delivery workflows for real-time user engagement.
- Developed fault-tolerant Apache Samza streaming application with auto-scaling capabilities, processing recommendation algorithms to deliver personalized email campaigns to 5M+ users daily.

Education

University of Waterloo **2018**
Software Engineering

Skills

Languages

JavaScript, TypeScript, Python, Java, C++, Golang, PHP/Hack

Backend

Node.js, GraphQL, REST APIs, Relay

Infrastructure

Kubernetes, Kafka, Apache Samza, CI/CD, Postgres, MySQL, AWS, OpenSearch

Specializations

Scalable Systems, Performance Optimization, Privacy, Accessibility (a11y), Cross-functional Collaboration, Ads Infrastructure, Monetization System, UI/UX Optimization, A/B Testing, Legal Compliance

Frontend

React, React Native, Redux, HTML/CSS

Testing

Jest, Unit Testing, Integration Testing, Jasmine
